

Intuitive programming

Discover the advantages of dual screen visualization for your workspace. With one screen dedicated to your primary VisiTouch application and the second screen available for displaying supplementary content such as 2D/3D view or PDFs/drawing files. Your workflow will become smoother and more streamlined than ever before.

Imagine having all the essential tools and documents you need just in front of you, all within one cohesive unit. No more switching back and forth between tabs or shuffling through stacks of paper. With dual screens, you can keep your main focus on bending while simultaneously referencing other important materials on the second screen.

This setup not only saves time but also reduces the risk of errors and enhances your overall work quality.

Main features

- **Enhanced Productivity:**
With two screens, multitasking becomes effortless. You can work on your main project while referencing other documents without disrupting your flow.
- **Improved Focus and Accuracy:**
Having all necessary information 2D/3D displayed simultaneously reduces the risk of mistakes and allows you to maintain better concentration on your tasks.
- **Convenience and Efficiency:**
Everything you need is right at your fingertips, neatly organized within your dual screen setup. This ensures that you can quickly access and reference the materials you need, exactly when you need them.
